PLATINUM GRIT BLASTING ABRASIVE

TRADE NAME

BLASTRITE® Platinum Grit

DESCRIPTION

Blastrite® Platinum Grit is a specially selected and graded slag abrasive with sharp angular particles. Generically referred to as a synthetic magnesium iron silicate. It is black in colour and particularly resistant to fracturing on impact.

FUNCTION

Blastrite® Platinum Grit is used where expendable abrasives are required for onsite abrasive blasting in shipyards, steel construction, oil refineries, power stations, offshore oil rigs and any blasting yard designed for diverse and flexible applications. The product is specially graded to optimise production whilst achieving designated surface preparation standards according to industry norms.

TECHNICAL DATA

Hardness Specific gravity Average bulk density Crystalline silica Conductivity % Chlorides pH (1% Solution) Moisture content Oil content	6 - 7 Moh scale 3 ≈ 1,8 kg/l < 0.15% <250 µS/cm <1% 6.13 <0.05% None	(Rockwell Hardness: 68HRC) (ASTM C128-15) (ASTM D7481-09) (NIOSH 7602) (ASTM D4940-98-15e1) (ASTM D512-04) (ASTM E70-07(15)) (ASTM C566-13) (ASTM D7393-16)
Oil content Asbestos content	None None	(ASTM D7393-16)

Dry, sheltered storage conditions Storage

Packaging 1.5 tonne Bulk bags or unitised 50kg or 25kg bags

SIEVING RANGE & PROFILE

CODE	SIZE RANGE (mm)	PROFILE RANGE (micron)	PERFORMANCE CHARACTERISTICS
B125	0.4 – 2.5	*145 - 195	The grain shape and high bulk density
B90	0.25 – 2	*100 - 140	result in a fast cutting and stripping abrasive.
B60	0.2 – 1.2	*82 - 110	Most economical media used for general blasting in the industry.
B40	0.12 – 1.0	*58 -76	Wide range of profiles achievable.

^{#-}LC is available on special request. This product code (i.e. B90-LC) specifies a specifically prepared low conductivity grade with conductivity <150μS/cm.

^{*} Blast profiles were achieved at 6 & 7 bar nozzle pressure, at a 400mm standoff distance and at 70°-80° angle to the substrate.
